

Since 1977 DGH has been reconditioning all types of hydraulic accumulators –

- Bladder
- Piston

As manufactured by –

Olaer, Fawcet Christie, QHP, Hydac, Bosch, Parker Hannifin etc.

We offer a complete stripdown, repair, service & certification.

On completion of re-assembly, units are fully tested on DGH purpose made test rig. Where statutory testing is required, accumulators are stretch tested on our purpose built water displacement unit.

In addition to normal maintenance & servicing, The Pressure Systems Safety Regulations 2000 require a Written Scheme of Examination to be drawn up by a competent person for hydraulic accumulators, their protective devices and interconnecting pipework.

The written scheme specifies, among other things, the type of inspection required and the inspection intervals.

DG HOWELL can draw up a written scheme of examination, inspect and test accumulators and protective devices. If required we can also remove and replace the accumulators from site.

Customers may also request our [fast turnaround service](#)

[Note that we have over 20,000 items on our database and can often cross reference an item.](#)

Appropriate test certificates can be provided on request.

OUR REPAIR PROCESS GOES ONE STEP FURTHER – WE ADVISE CUSTOMERS OF PROBABLE CAUSE OF FAILURE & ADVISE ON BOTH REMEDIAL & PREVENTION MEASURES
